## Meet your Course Coordinator

**Patanamon Thongtanunam**
**Course Coordinator, Master of Software Engineering**
Senior Lecturer & ARC DECRA FELLOW, Computing and Information Systems

Session will commence soon

The University of Melbourne acknowledges the Traditional Owners of the unceded land on which we work, learn and live: the Wurundjeri Woi-wurrung and Bunurong peoples (Burnley, Fishermans Bend, Parkville, Southbank and Werribee campuses), the Yorta Yorta Nation (Dookie and Shepparton campuses), and the Dja Dja Wurrung people (Creswick campus).

The University also acknowledges and is grateful to the Traditional Owners, Elders and Knowledge Holders of all Indigenous nations and clans who have been instrumental in our reconciliation journey.

We recognise the unique place held by Aboriginal and Torres Strait Islander peoples as the original owners and custodians of the lands and waterways across the Australian continent, with histories of continuous connection dating back more than 60,000 years. We also acknowledge their enduring cultural practices of caring for Country.

We pay respect to Elders past, present and future, and acknowledge the importance of Indigenous knowledge in the Academy. As a community of researchers, teachers, professional staff and students we are privileged to work and learn every day with Indigenous colleagues and partners.

# Software Engineering

*“Programming is the immediate act of producing code. Software engineering is the set of policies, practices, and tools that are necessary to make that code useful for as long as it needs to be used and allowing collaboration across a team.”*

**Titus Winters,**

**Software Engineering at Google: Lessons Learned from Programming Over Time**

# Software Engineering

- Software engineering is about *more than* just programming
- Software engineering is about building large systems that work
- Software engineering is a discipline that concerns both technical and non-technical aspects

**Software Engineering** is the discipline that combines the use of Science, Mathematics, technical principles, and management to create and deliver working software systems *on time* and *on budget*.

# ABOUT YOUR COURSE

Master of Software Engineering (MC-SOFTENG) degree aims to provide you with an understanding of

- How to conceive, analyze, design, and implement software systems;
- How to manage the engineering of software systems;
- Some of the theory, technology and principles behind the construction of software; and
- Some of the technologies used in the construction of software systems

The aim is to give you **the foundation to learn, adapt and work** in many different fields of computing and software engineering, not to teach every possible technology or software method in the short space of time that we have together.

# Understanding Course Structure: Master of Software Engineering (MC-SOFTENG)

**Compulsory subjects**

Core foundational knowledge that builds towards the software engineering discipline

**Selective subjects**

Elective subjects from a specific list of options within the software engineering discipline.
